

On the Gradient Pole Shift

The HAL Books by Randi Green used as supporting information in this article

- 1) Souls of Humanity (about the Regressed Races and OWO – the latest rounds of modification done to us).
- 2) Reconstruction of the Planetary Soul (the fall of the 2nd cycle mammal-avian races ATE)
- 3) The HAL Philosophy Book (explaining the Pillar Project & the HM ideologies).

On the Original Er´Th

As the NGC Activation and Clean-up Cycles work their way through the collective holographic networks of our reality and the alien inserted alteration networks are removed and disconnected from the racial grids, our planet will move back into its original racial grid and network settings following the original Er´Th.

Explainer

Gridworks, or racial grids, are connected to the bio-field and all organic lifeforms in the original holographic reality field. They uphold the code sheets (or sheaths) running the energy system of the organic bio-forms present in that system. The racial grids date back to the original 12 universal lineages in the Pillar Project aka the original Solar System project and its true humanities working here to create new developmental programs for continued progression. As the timeline event hit our system, the Pillar Project workstations were altered to find a way to undo the effects of the timeline event. Later on, it became a sector for the infected from this and other systems, i.e., a drop-zone, and isolated using an artificial constructed solar system with no other visible realities around.

Networks, or planetary information networks (the PINs), are connected to the holographic foundational setup and programs upholding running a reality field. It is via the networks that different forms of developmental programs can be inserted. The developmental programs run what is called the holographic teaching systems and guidelines of what to achieve in that reality field. The developmental programs are governing a reality field along with the Councils. Other types of technology are also linked to the networks.

The Northern Pole Shift change the Axis of the Earth – in Overview

How the tilt used to be

Attempt to uphold this via the Pegasus Host Field

<https://youtu.be/fhtPOSGOU68>

How the new tilt is going to be

Allowing for parallel system incoming races from the 3rd cycle (transhuman races)

The Effects of the Gradient Pole Shift

Read the Scientific explanation <https://www.sciencedaily.com/releases/2021/04/210425114433.htm>

Our explanation

The following explanation is not completely in line with how science works with this, but for our double awareness purpose and the inner information level, the shift of the north pole will render personal consequences because our bio-field is connected to Earth's magnetic field within the outer reality settings, as well as the racial grids within the original holographic reality field.

In other words, our current bio-field is connected to Earth's magnetic field giving us the correct perception of our position in space-time as well as controlling the energy currents that run into our bio-field stemming from the planet itself, the moon, the sun and cosmos. These energy currents fuel the frequency-based atomic fields and all molecular levels in our reality. In the human bio-field these currents can be seen as the 4 layers of vital forces explained in the HAL Integration Class 6.

Shift of the North Pole

The gradient pole shift has changed the position of the north pole (the axis that points north). It is moving away from Canada and the American continent. Instead, it is moving towards Russia and the Eurasian continent. In our understanding this means that the overall magnetic field technologies are no longer under the supervision of the Western hemisphere but are, for now, under the attempt to be taken over by the factions of the Eastern hemisphere. Naturally, this has political implications but also implications on the weather dynamics, Earth's magnetic field, the holographic networks and racial grids. And lastly, the shift of the north pole affects our bio-field via the ultra-low frequency resonance fields.

We must also take into consideration that *the equatorial line* is shifting too due to the closing of the two main gate systems on our planet, bridging [the southern](#) and [the northern](#) hemispheres together.

These two gate systems are positioned in Egypt and Mesopotamia. The Egyptian White Orion-Sirian A-Pleiadian gate is connected to Mars. This gate is also driving the tropic of Cancer under the solar-stellar races. The Mesopotamian gate systems were the old triangular gate systems under the Nibirian-Aldebaran-Lunar races connected to Nibiru-Venus-Moon. This Mesopotamian gate systems are driving the energies in the tropic of Capricorn under the ancient Lunar-stellar races. The Mesopotamian gate systems have been completely transformed recently into a dark portal. This naturally affects the energies and function of the magnetic field into a split type of energy.

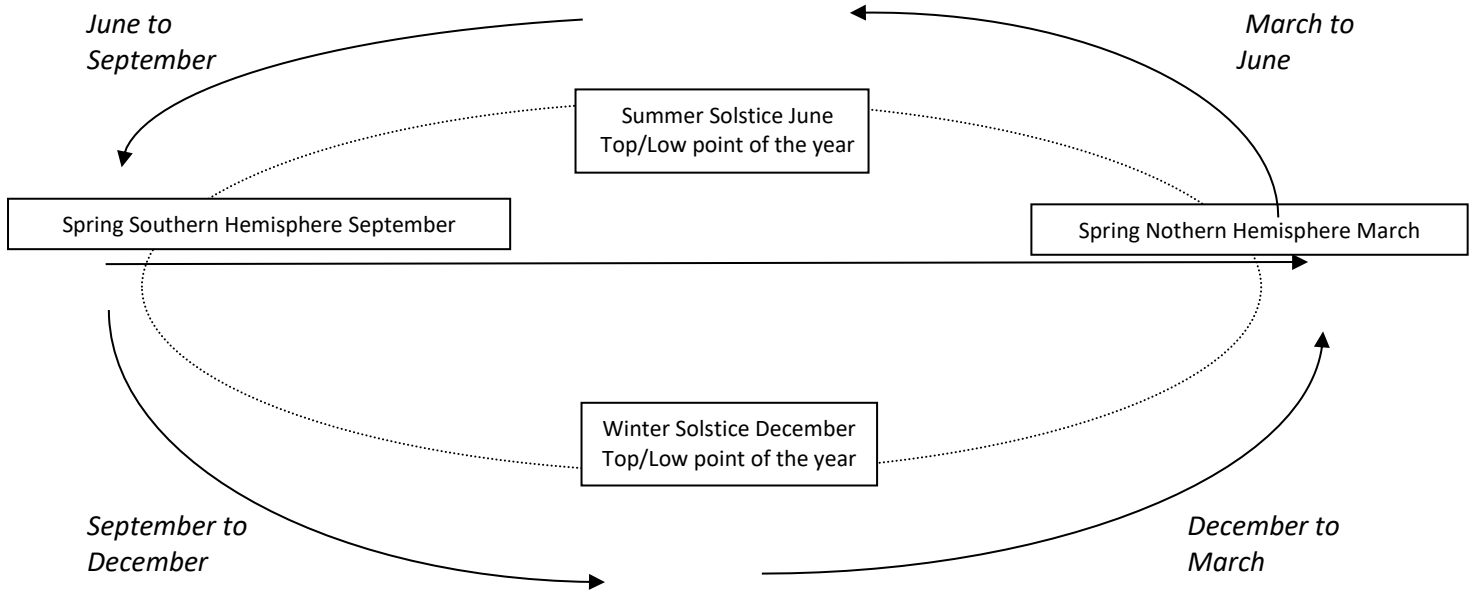

Learn about the tropics here <https://youtu.be/JI1Q5sVtuZw>

Learn about Equator on World Map YT <https://youtu.be/EanbzyE-UbU> and the division into the southern and northern hemispheres.

If you take the time to watch these videos, you will understand the political and humanitarian issues of these countries on the different parts of the world map seen in the light of being part of the really old worlds that arose after the last ice age, being the habitable zones at the time.

The Energetic Cycles

The energy currents are divided into the two hemispheres with different forms or high and low energies. The division is important in our work to maintain our energetic balance:

The Energetic Cycle of the Year Northern Hemisphere

As shown above, the year in the northern hemisphere begins on equinox around March 20th or 21st and peak, energetically speaking, in the summer solstice around June 20th or 21st. After summer solstice the energies begin to subside and reach their lowest around December 21st or 22nd with the winter solstice.

The Energetic Cycle of the Year Southern Hemisphere

As shown above, the year in the southern hemisphere begins on equinox around September 22nd or 23rd and has its peak, energetically speaking, in the summer solstice around December 21st or 22nd. After winter solstice the energies begin to subside and reach their lowest with summer solstice around June 20th or 21st.

As the sun moves above and below equator and fuel the two hemispheres with either high or low energies, the magnetic field differ in energetic viability too. The countries in the southern hemisphere, under the tropic of Capricorn, are depleted most of the year due to the many ages, they have held lifeforms that did not succeed in their transformation and transmutation processes, aka undoing the effects of the timeline event. Different shield technologies have been utilized to keep up an artificial status quo in the two hemispheres, albeit this artificial upholding is generating huge amounts of kinetic energy, hence the constant heat in the countries using the shields.

To keep the northern hemisphere functional as things are now, the Pegasus Host-field has been inserted using future technologies from Nibiru-Arcturus aka Alpha Centauri, along with new shields above the tropics of Cancer. This allows for renewed amplification of the planetary holographic networks and alien inserted racial grids, along with the genetic modification programs done to uphold an artificial high energetic bio-mass on the planet. This is mainly done to preserve the NSEH and not the current humanity.

The Future Belts of Energy generated by the Original Er'Th Programs

As the foreign stellar races are doing their thing, the NGC is activating the original Er'Th programs that generate the original holographic networks and racial grids on our planet. As we do the energetic transformation, via the vibrational field, and later on the transmutation, via the radiation field, we access the new code systems – via the original true human genetics - to be integrated into the bio-field and by that activate the after solar-stellar transition energies running in the networks and grids. Four main belts are being arranged, by the original Elder Technologies on the other side of our planet in the Pacific Ocean on the 6th dimensional level.

The first steps of the transformation and transmutation processes in terms of the frequency-based alteration dynamics (old spiritual system) are explained in the two online courses:

- 1) Extractions from the HAL Integration Class 5.
- 2) The HAL Integration Class 6.

Naturally, you can also find the older version of this work in the Alice A. Baily Material and books.

The 4 Main Belts of the Future Humanity after the Solar-Stellar Transition

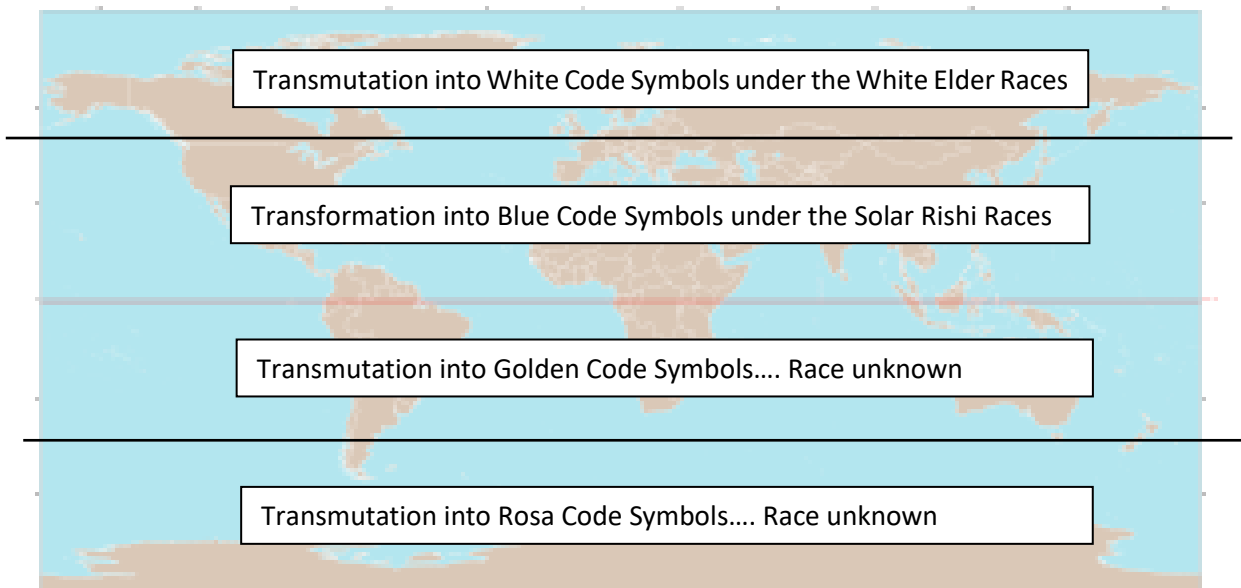

Image from <https://simple.wikipedia.org/wiki/Equator>

The 4 Main Belts of the Future Human races, and their basic bio-field code systems, will be divided into 7 minor fields, above and below the equator following the two hemispheres:

Levels 1-7 above the equatorial line begin with the first two levels from equator until the Tropic of Cancer, then levels 3-6 are positioned above the tropic of Cancer, but can vary due to energetic fluctuations in the magnetic field. The top level 7, or the highest energy belt, is positioned on the North Pole.

Levels 1-7 below the equatorial line begin with the first two levels from equator until the Tropic of Capricorn, then levels 3-6 are positioned below this line but can vary due to energetic fluctuations in the magnetic field. The top level 7, or highest energy belt, is positioned on the South Pole.

The Dynamics of Progression

Overview of the Transition Work for the original LPU races and HM races (Systemic and Solar Races)

Below, an overview of the four main forces and energies, we operate within and are to master. Mastery means to perceive, understand, work correctly with (using the Principles, Rules and Laws) and then transform or transmute what is encountered. **More is described in the HAL Transition Courses as well as the other upcoming courses and group classes 2022 and onward.**

Explaining the 4 Main Dynamics of Progression

- 1) This work includes what is within our energetic state of current existence, i.e., the three lower and three higher order fields, as well as on our past timelines and their genetic connections to artificial work stations (such as the OWO 4D operating stations driven by the regressed races and their non-biological entities, or the remaining fallen 5D work stations from the Atlantean humanoid colonies). It also involves the work with the Lunar energies and grids from which our bio-DNA is built.

The NGC is chewing its way through these levels on the collective timelines of our solar system within the original holographic grids, but our personal work remains and is ours to do, since it is part of our 6 layered fields and thus our responsibility. Remember, there are collective timelines and individual timelines.

This means that once the collective timelines of the original LPU and the original HM Solar System holographic grids are cleared, if we are not in alignment with these, we will be drawn – due to energetic and genetic affinity – to the reality fields that are in alignment with our energy system, cf. the relative reality dynamics.

The HAL Project Advanced Articles

Article 3 September 2021

- 2) It involves the understanding of the NGC Dynamics and how we catch the wave of activation and clearing to regain as much of our original structure as possible, or to dissolve it in order to upgrade our 6 layered energy system (6th dimensional work).

From *the HAL Philosophy Book*, pages 42ff.

Given that our system was to develop the 6-12 pillar, it was built with 6 developmental realities and their adjacent progression pillars – we can call these towers of other-dimensional existence - into which the races progressed their energetic and consciousness potentials:

1. The 1-7 pillar (the D1-7 individual segment of knowledge).
2. The 2-8 pillar (the D2-8 racial segment of knowledge).
3. The 3-9 pillar (the D3-9 reality field segment of knowledge).
4. The 4-10 pillar (the D4-10 systemic segment of knowledge).
5. The 5-11 pillar (the D5-11 holographic segment of knowledge).
6. The 6-12 pillar (the D6-12 universal segment of knowledge).

The 6 developmental realities held dissimilar versions of the human lineages. These were called *root races*. Each root race had their own variation of energy sequences (what we call DNA) to build the organic vessel, a distinct energy system and specific consciousness units. All the root races were designed to achieve the highest purity rate, the highest standards and the highest progression rate to be met in their realities, assisted by the developmental programs of their pillar and the approved governance of their reality.

The Activation and Cleanup Stages of the Completion Cycles

1999-2007: Activation and cleanup of the holographic-technological segments of the minor and major grids within the 5-11 pillar, i.e. the Atlantean Project and Technologies.

2008-2016: Activation and cleanup of the systemic segments of the minor and major grids within the 4-10 pillar, i.e. the Sirian A-Pleadian-Nibiruian Projects and Technologies.

2017-2025: Activation and cleanup of the reality field segments of the minor and major grids within the 3-9 pillar, i.e. the Lunar-Andromedan Projects and Technologies.

All these projects lead to unfortunate futures ruled exclusively by technology and non-biological lifeforms, which all fields supporting these ancient projects, their templates and genetics must be either transmuted into their higher order counterpart or downward transmuted into dust.

The clearing processes of these ancient programs and collective timelines are almost done, including their cluster segments and nodal points with Advisory Boards, Holographic Teaching Systems and original 6th dimensional technologies part of the original Pillar Project.

The Planetary Level and Our Near future

2026-2034: Activation and cleanup of the racial segments of the minor and major grids within the 2-8 pillar including the racial grids within our planetary system.

2035-2043: Activation and cleanup of the individual segments of the minor and major grids within the 1-7 pillar including the templates and first Library settings upholding the current humanities in the 6th dimension.

The HAL Project Advanced Articles

Article 3 September 2021

After this process, the original LPU or the Pillar Project will no longer be part of the current after timeline event solar system (the ATE solar system). What was viable and functional from these levels of the ATE solar system have then been transferred to the original Solar System Holographic Reality Settings, holding holographic-radiation-vibration energies or HRV-energy aka density energy.

- 3) Our work is to meet the criteria of the original cycles under either the before timeline event LPU (the BTE LPU) or the original evolutionary cycles as taught in the Pillar Project under the original Er'Th solar humanities. This is part of the Solar System Transition Dynamics.
- 4) How to manage a life within our world as it changes due to the remaining dharma of the foreign races present in our solar system and what they need to complete to finalize their cycles of evolution. In that game, we are pawns and experimental puppets of their convenience. This level is already worked with in the HAL Project Blue Flower (how to arrange a base program life, and do this work) as well as the HAL Basic Idea Courses.
