

THE MATRIX OF CHANGE

The Extra-Systemic New Reality Programs

As indicated in the earlier material, the overall new reality programs are instigated by the extra-systemics. We will of course adapt these into matching our progression work and the changemaker psychology.

The goal is to shift the holographic reality field codes from the old reality programs and into a new type of reality programs able to uphold 4th and 5th cycle fields, transferring the current code systems into these by upgrading and modifying the inserted artificial 4th and 5th dimensional fields of the OWO races. To unfold the content of the new reality code systems, the new code sequences will be inserted into the existing artificial fields as imprinted complex holographic information systems. It is up to us to unfold the zip-code content.

To support the new code sequences, outer reality program settings have been made for us to follow the guidelines of where the new realities are heading, as part of the future human communities.

Now, it is possible to upgrade humanity genetically to withstand the regressed reality timelines that are a disruptive factor of the current reality programs, but without outer changes, and new ways of living to unfold the codes of the upgraded genetics, they will vanish and cease to function. They will decline and evaporate if not used within the new reality programs, and their sub-programs aimed at the selected groups.

And finally, the new programs allow for extra-dimensional terraforming of our reality field into a new type of 4D and 5D reality setting, based upon the extra-systemic technologies, which are yet to be revealed as we get further into the new timeframes and relative reality features of their worlds.

The Intersecting Systems in Reality Fields

It is important to see reality as a spectrum of intersecting systems. Within that frame of reference, we understand that any and all systems interact with other similar systems, as in when one system, or sector, is affected, the others will be as well. This takes place via advanced feed-back loops, amplification vectors and the inbuilt affectability rates, i.e., the more a system relates to sections of one of the other systems, the larger the effect will be.

The HAL Academy New Reality Project

– Getting Ready for the Future

This means that any change in one system will affect and initiate changes, or a ripple effect, in the adjacent ones. We have forgotten these systemic dynamics in our reality governance. We see everything from a local point of view and not from a systemic-energetic and global point of view, as part of a larger interactive system.

Example 1

We tamper with the environment and planetary resources, the human genome and other forms of genetics, and we expect the human composition and configuration to remain the same. And we get startled when the human electrochemical processes suddenly changes and new ailments appear (epigenetics).

Example 2

We pollute, use chemicals and other toxins and set the standards of how these alternations will affect our health according to local perimeters and not seen from a global accumulative point of view. So, no wonder that our ecosystems and the human organisms are breaking down. We overlook that we live on a planet full of other lifeforms made of the same molecular structures as we are and that we are made of the same atomic energies interconnected from the quantum fields into the electron, proton and neutron fields.

We are not disconnected lifeforms in a disconnected world. We are made of the same matter, same energy and same genetic material, and all are upheld by the energetic fields behind our reality, us included.

Example 3

We try to avoid the effect of one catastrophe and overlook the feed-back loops into the relating systems and how the choices we made, to secure our organic safety and everyday life pleasantries. If we miss the feed-back loops, we also miss that changes in one locality potentially can lead to territorial claims on resources in other sectors and how easily countries in financial distress act out to secure their own power and status, leading us into multiple strives over resources and allocation of resources.

The Basic Matrix of Change – a Complex Holographic Upgrading Technology

Perhaps these examples are too simplistic, and science will tell us that these things are not interconnected, but this is where I will be pioneer of new systemic sciences and say: They are.... and this is why:

For starters, we must understand that when we overlook the amplification vectors and the effects of the alteration of one system into another, and when two systems are affected, as illustrated with the 3 examples above – a very short version of complicated systemic-energetic dynamics – the amplification vectors will spill over into one of the other four main reality systems, and initiate

The HAL Academy New Reality Project – Getting Ready for the Future

changes there as well. As more of the systems get affected, the higher the affectability rate – that is the momentum of the amplification vector - will be on the overall reality matrix due to the amplification vectors.

The growth rate in the matrix of change, in the overall holographic network, will go from the local 1:1 ratio into exponential systemic growth rates, tipping the reality matrix into completely new dynamics and processes. All due to the sum of the systems involved and their local amplification rates. 1+1 gives 2, and 2+2 give 4.

A matrix of change is a four-fold systemic-energetic transformational form of advanced technology, often driven by inserted reality programs and alteration of gene sequences. These technologies appear to us, as if they are of alien origin. The fact is, they are already part of our reality field and were engineered a long time ago by other very advanced human civilizations that have preceded us.

A scheme of events has four corners of probabilities and possible outcomes. It's a complex holographic interactive system with exponential growth potentials of the inserted pre-coded possible events, unfolded in an ordered manner to allow them grow into a pattern of probability and from that go into manifestation.

Each of the four sector/systems has to reach a certain mass of energy before its content begins to manifest. A holographic matrix is used to create changes; it could be seen as a sort of reality program, since it holds codes and complex holographic information systems with the sole purpose of changing the energies of reality.

It could also be viewed as a new complex holographic information system inserted into the original holographic program setup of our reality to generate new behaviour and results. It is based upon extra-systemic technologies and modification sciences.

The new complex holographic information system works like a worm into the original programs to slowly unfold the new vector potentials and adaptation codes. Humans, and their actions, amplify the effect of the new complex holographic information system.

When one of the sectors in the complex holographic information system gets the upper hand, it affects the other three sectors and they can then, in succession, play out their content as well.

The HAL Academy New Reality Project – Getting Ready for the Future

For now, all four sectors are in play in the world. They are building up within our reality field, since they are fuelled by how humans react to the changes. The new complex holographic information system is interactive with the targets under the patterns of change, as all holographic programs are interactive.

The end-result of the new complex holographic information system and its validity, rests upon the reactions from the users. That will be called the "choice of humanity" and that will set the tone of the future to come. The question is, which of the events that will become the strongest (by the choice of the users and their reactions) and thus sets the tone of the other three, making them unfold their potentials within the frame of the strongest.

Adding to the Matrix of Change

We need to add the transformative processes to the matrix of change.

We need to address the self-destructive and harmful tendencies in groups of humans, saying they are doing it for the greater good, when they know, in fact, they are playing with fire. It is a contest of reaching the best invention and not built upon common sense.

History has taught us that, and apparently humans have not learned from it at all. These humans self-justify their actions with excuses, blaming it on the economy, trying to pretend that their ways of living are more important for our generation than for the next. Nobody is really paying any attention to what they are doing. Not even with the climate crises in our face.

Humans move too slow to really instigate changes, which could shift our entire society into a prosperous one. We are caught up in our everyday life. The extra-systemics use this as the foundation of why it is okay to intervene with our reality and the human race. As always, the majority suffers on behalf of the minority.

The HAL Academy New Reality Project – Getting Ready for the Future

The Event Program – The Attempt to Upgrade the OWO Programs (failed)

Our planet, in spite of the many pictures from space, does as such not exist. It is difficult to explain but as we learn to understand how dimensions work, we understand that what we perceive and observe is determined by the energies we consist of. If we were 4th dimensional beings, the planet and space would look totally different.

The true reality field extends from the core into additional 9 dimensions of manifest reality and 3 higher non-organic worlds, based upon the domains.

The outer domain reality field is positioned as the holographic foundation behind the Enclosure, and most of the dimensional fields are positioned adjacent to our perception of reality – they intersect and interact with our world. Here many different extra-systemic races exist, having a 4D or 5D vessels with their type of awareness and reality field laws, rules and setups.

The Domains

The Core and Inner Domains permeate the Middle and Outer Domains as radiation and vibration.

All Creation unfolds from within and outwardly; not from the outside and in.

The Three Principles are the basis of the Core Domains.

The Inner Domains are the areas of the True Worlds.
